COLLOIDS AND SURFACES A

Subject Index

Acidic oil/alkaline interactions, 61
Adsorption, 17, 137, 213, 267
Affinity, 173
Aging, 251
Alcohols, 137
AM1–SM1 calculations, 241
Anchored ion exchangers, 145
Anionic surfactants, 221
Antibody activity, 193
Antibody immobilization, 193
Aqueous suspensions, 241

Bentonite, 17
Block copolymers as deinking agents, 275
Boundary layers, 83, 97
Bubbles, 83, 97

Calcium carbonate, 159
Calcium sulphate, 159
Carbon, 127
Catalytic titania, 31
Cationic–anionic surfactant mixture, 1
Cellulose membrane, 173
Cetyl alcohol, 251
Cetyltrimethylammonium bromide, 9
Cetyltrimethylammonium chloride, 251
Chemical enhanced oil recovery, 107
Chemical sensor, 127
Chromite, 75
Coagulation, 153
Colloid stability, 153
Critical micelle concentration, 213

Deinking agents, 275
Deinking of office waste paper, 275
Deposition, 315
Derivatized ion exchangers, 145
1,3-Dioxalane, 213
Disturbance flow, 83, 97
Dynamic interfacial tension, 61
Dynamic inversion, 221
Dynamic light scattering, 45

Electrophoretic mobility, 241
Elimination, 303
Emulsion, 221
Emulsions, 289
Equilibrium, 289

Fine solids, 83, 97
Flotation deinking, 275
Fumed silica, 241

Gel permeation chromatography, 45
Graphitized carbon black aggregates, 203

Hematite, 315
Heterocoagulation, 153
Humidity detection, 127
Hydrodynamic interaction, 83, 97
Hydrolysis of Titanium(IV) isopropoxide, 31
Hydrosilane, 229

Ink removal by PEO-PPP-PED copolymers, 275
Inorgano–organic ion exchangers, 145
Interfacial rheology, 9
Interfacial viscosity, 9
Isolation, 303

Kamlet–Taft model, 137

Lead and calcium adsorption, 159
Lead carbonate, 159
Lead sulphate, 159
Linear solvation energy relationships, 137

Metal surface, 315
Micellar solutions, 203
Micellisation, 213
Microlayer evaporation model, 315
Mixed micelle, 107

Mixed monolayer, 107
Modified silica, 241
Molecular interaction, 1
Monomer suspensions, 267

Nitration and amination, 193
Non-ideal monolayers, 107
Nonionic surfactants, 289

Oil/water emulsion, 257

Parallel diffusion, 173
Particle size distribution, 241
Polyacrylamide, 9
Polyalkyleneglycol, 17
Polymer colloids, 153
Polystyrene, 193
Polystyrene films, 181
Poly(vinyl alcohol), 267
Porosity, 127
Product selectivity, 303

Rheological properties, 251

Scanning electron microscopy, 315
Selective shear flocculation, 75
Serpentine, 75
Settled material, 75
Silica, 45, 257
Silicone oil, 289
Small-angle neutron scattering, 203
Sodium dodecylsulfate, 9
Solution-phase NMR, 17
Solution casting, 181
Solvation effects, 241
Spin coating, 181
Stabilization, 257
Stöber silica, 229
Substitution, 303
α-Sulfolauric acid and salts, 1
Sulfonated dyes, 173
Sulfonic esters, 303
Surface activity, 1
Surface analysis, 193
Surface topography, 181
Surfactant-enhanced alkaline solutions, 61
Surfactant concentration, 221
Suspoemulsion, 257

Thermal analysis, 17
Titania, 31
Transport phenomena, 173
Triethoxysilane, 229
TritonX-100, 9

Vinyl chloride/water interface, 267

Water, 289
Wetting properties, 181

Yield value, 251

Zeta potential, 45, 75
